

EVERYTHING FROM ONE SOURCE

The KS Biegetechnik GmbH Company is a global, medium-sized company with over 30 years of experience in the bending of plastic, aluminum, and steel profiles. Our primary focus is window construction but we can bend all other plastic, aluminum and steel profiles as well. We also offer short delivery periods: Production of arches in eight days and the welded elements in 14 days.

Overview of our service:

- Bended PVC profiles such as semicircular, segmental, circular or basket arches
- Bending of aluminum and steel profiles
- Prefabricated welded and bended elements such as rectangular or circular pivot hung windows, circular, segmental, semicircular, basket arch windows as well as slanted and triangular windows
- Bended steel reinforcement for the arch area
- Specially lined corners
- Round or oval aluminum window sills
- Bended aluminum cover plates, also fitted
- Round and rectangular shutters made of plastic and aluminum

ALUMINUM COVER PLATES

bended and fitted

KS Biegetechnik GmbH

Create interesting accents with precisely fitted aluminum cover plates

Bended aluminum cover plates are an attractive option for windows in PVC. They connect the best of two materials: a high heat insulation due to PVC profiles and an exceptional look due to the aluminum surface.

We not only bend the aluminium cover plates suitable for semicircular and segmental arches, we also produce the complete PVC window. We fit the bended aluminium cover plates and you will receive the manufactured window.

Your advantage: you receive the PVC window and the aluminum cover plates from one source. This guarantees that the aluminum cover plates will exactly fit your window frame or sash profile.

We bend and manufacture aluminum cover plates of all reputable manufacturers. Of course the aluminum cover plates can be powder coated in all RAL colors.

Example of bended and fitted aluminum cover plates

One of our segmental arch windows with fitted and powder coated aluminum cover plates.

To customer requirements the corners can be manufactured with mitre-cut or joint.

Design variant for aluminum cover plates

Manufactured
with joint

Manufactured
with mitre cut

Special challenge:
The joint is rounded.
